a
Field of view 128→512 px, position-invariant arm
43.54
Evaluation target V ≥ 1 vs V ≥ 4, arm A, threshold 0.5
28.58
Position offset of 8 px (median of ten arms)
26.40
Field of view 128→512 px, both confounds removed
22.29
Binarisation threshold, arm A at V ≥ 4
9.99
Cost of translation augmentation (centred test)
6.10
Supervision target, five arms at V ≥ 4
3.12
Architecture, five models at V ≥ 2
1.19
Retraining with a new seed (2σ, validation)
1.19
Evaluation protocol
Evaluation protocol, confounded
Data / training protocol
Learning design
Run-to-run noise floor
Cross-validation estimate
0 10 20 30 40 50
Change in Dice (points) when one factor is varied
b
0.5 1 2 5 10 20 50
Effect ÷ noise floor (×)
c
Field of view ÷ architecture range: 15.57× [9.27, 30.94]
Field of view ÷ supervision-target range: 7.03× [5.84, 8.65]
1 2 5 10 20 50
Joint bootstrap ratio (×), 124 common test cases
